

FOR PARTICIPANTS

Incident Type: Inconclusive

Case Number: 2026-0101

Date of Incident: February 2, 2026

Date Reported: February 3, 2026

Victim Name: Kiro Veyron (aka Echo)

Official Time of Death: Between 11:20 p.m. and 11:45 p.m.

Location: Internal Integrity and Breach Oversight (IIBO) department, Echo's Office

Reporting Officer: Detective Liam Maslow

Case Summary

At approximately 7:00 a.m., February 3, 2026, the body of Kiro veyron (Echo), Director of Internal Integrity and Breach Oversight (IIBO), was discovered by Mira Hayes, a junior systems analyst at IIBO. The victim was found seated at his desk, wearing a neural interface headband. His eyes were open, and a faint trail of dried blood was visible under his nose. The neural link's indicator lights were frozen in amber, signaling a loop error. There were no signs of struggle or forced entry; the office door was locked from the inside. Locks show Echo's ID used the night of the incident. The air had a faint ozone smell, typical of high-frequency electrical discharge.

Physical & Digital Evidence

- **Exhibit A:** Neural Interface Device - damaged internally by surge activity.
- **Exhibit B:** Office Console Logs - truncated entries originating from multiple departments between the time of death.
- **Exhibit C:** Personal Diary - partially encoded, written in fragmented syntax. Content described as "nonsensical" but contains repeated references to "The Cross-Sweep."
- **Exhibit D:** Air sample - elevated ionization consistent with short-range pulse activity.

Forensics

Data Logs shows truncated logs with different short entries from different departments within minutes of each other. Recorded abnormal high-frequency stimulation at 11:00 p.m. Neural activity flatlined immediately afterward. However, **data systems show high-volume interdepartmental traffic** moments before the estimated time of death. According to medical reports, the primary cause of death was neural feedback overload or device malfunction. Brain examination shows **extensive cortical excitation and swelling**.

FOR PARTICIPANTS

Statements of Suspects

1. Mira Hayes - Junior Analyst at IIBO

"I arrived at the IIBO office around 6:50 a.m. At about 7:00, I went to Director Veyron's office to deliver a report. The door was locked from the inside and he didn't respond when I called out. Security logs showed his ID was used during the night, so an override was authorized.

When the door opened, I saw him seated at his desk, wearing a neural interface headband. His eyes were open, and there was dried blood under his nose. The device lights were amber, which I recognize as a loop error. I noticed a faint ozone smell in the room.

I didn't see anyone or anything suspicious inside the office. I didn't touch anything. I was scared. I left immediately and contacted security and emergency services."

2. Samuel Jackson (Silver Tongue) - Supreme Director of Order & Stability

"Echo was a valued member of the Board. He was more than a colleague... he was a friend. We shared decisions, debates, even quiet moments away from the chaos of duty. Losing him is a personal blow, as well as a professional one. Whatever occurred that night stemmed from procedural overreach, not sabotage. Some acted recklessly under the guise of duty, ignoring the consequences of their choices.

Claims that our work contributed to the incident are unfounded and, frankly, disappointing. Order is my directive, not destruction. Those who understand the system's architecture know where fault truly lies, in disorder, not discipline."

3. Kiera Solas (Ananke) - Chief Probability Architect for Predictive Analytics & Dimensional Logic (PADL)

"On the night of Echo's death, PADL registered several high-frequency events consistent with multiversal interference. My department's predictive systems responded automatically, recalibrating temporal variables to prevent a cascade.

These adjustments were non-invasive, strictly algorithmic, and posed no biological threat. If his neural implant failed during that window, it may have been due to compounded network stress, not predictive influence.

FOR PARTICIPANTS

I regret the loss deeply, but mathematically speaking, the collapse probability curve has since stabilized.”

4. Carl Rogers (Cipher) – Chief of Cyber Integrity & Systems Defense (CISD)

“Echo accessed restricted layers during his audit without clearance, that alone would’ve triggered containment alerts. CISD’s role is strictly defensive: maintaining firewall integrity and monitoring inter-division traffic.

Some speculate our filters caused his neural failure, but if CISD had induced a surge, the mainframe’s trace protocols would show it. My department prevents system collapse; we don’t cause it.

I am saddened to hear of Echo's death, it was a tragedy, just not a technological one.”

5. Jack Sparrow (The Goose) - Director of Reality Reconstruction Operations (RRO)

“Some people like to point fingers, acting like I had something to do with Echo’s death. If I wanted him gone, trust me, there wouldn’t be a trace left. Let’s not kid ourselves. High-and-mighty directors love to panic, blame others, and dramatize every mishap. That’s how chaos spreads, and everyone thinks someone must be guilty.

All that sentiment... It's a luxury no one can afford. Grief is for the weak, and the world doesn’t care who you call a friend. I’m not here to play the tragic hero or feign concern for anyone doing their job. That’s on them... and on those who can’t keep their systems in line.”

6. Alice Blake – Senior Reconstruction Engineer at RRO

“Kiro and I argued about the same thing, over and over again: what counted as responsibility. He believed restraint kept realities alive. I believed hesitation killed them.

He reviewed my work more closely than anyone else’s. Sometimes I felt like he was watching for failure instead of success. I won’t deny that it bothered me. When someone keeps calling your choices “ethically compromised,” it changes how you speak to them.

But conflict doesn’t mean hatred. I didn’t want Kiro gone. I wanted him to stop treating possibility like a threat. It is unfortunate that he is gone. Whatever happened to him wasn’t the result of a personal feud.

Also, on the night of Echo’s death, I wasn’t even in the building”

7. Rowan Hale - Senior Integrity Auditor at IIBO (*Echo's Division*)

"Echo was the reason I stayed. When everything else felt hollow, his work still meant something. I trusted him. More than I believed in him. I believed in what he was trying to protect, even when it isolated him. People only see the pressure he put on others, but they never ask why he was willing to carry that pressure himself.

And now he's gone.

I don't care what excuse justifies it—fear, ambition, resentment, ideology—it doesn't matter. Anyone who killed him didn't silence a threat. They destroyed someone who was trying, obsessively, to make sure the truth survived.

Echo used to say that truth holds under pressure. I don't know if that's still true. But I do know this: whoever took his life didn't just cross a line. They shattered something that can't be rebuilt. And I won't forgive that."

8. Cygnus Chronos (The Archivist) - Director of Archival Integrity

"Echo and I did not always agree, but we respected each other deeply. He believed truth should be exposed no matter the cost. I believed truth required care, context, restraint. Still, I valued his conviction. It challenged me.

We met privately often to talk. Oh the quiet conversations... He wanted to understand why I believed the system needed protection from its own transparency. I wanted to understand how he could trust honesty to save lives when honesty so often destroys them. It was never an argument; just two people trying to reconcile incompatible beliefs.

Losing Echo feels like losing the last person who was willing to question me without malice. Whatever happened to him, it was a tragedy, not just for the system, but for the integrity he stood for."

9. Maya Ross (The Veil) – Director of Aftermath & Erasure Division (AED)

"Echo always pushed for restorations after my division had already contained the damage. I warned him that some truths destabilize systems simply by persisting.

FOR PARTICIPANTS

Sometimes he listened. Sometimes he asked for fragments back anyway, and my teams absorbed the consequences.

On the night of Echo's death, I remained off-network from internal Board systems for most of the evening, as Echo had already held the sweep meeting and instructed all divisions to minimize activity on the network during his audit.

Echo's death is a loss to the Board, not because he was agreeable, but because he forced decisions early. The structure will continue. I'm not convinced the balance will."

10. Isaac Grayson - Field Erasure Specialist at AED

"On the night of Echo's death, I was in my office at AED West Wing, reviewing residual erasure reports. I did not leave the building, nor did I have contact with Echo that evening.

My relationship with Echo was professional. I respected his commitment to principle, even when it conflicted with operational safety. We had disagreed in the past, most notably when he ordered the restoration of an erased anomaly into the internal archive, an action that reintroduced instability and placed my team at risk. I disagreed with the decision, but I understood his reasoning.

There was no hostility between us. Only professional friction. Those differences never escalated beyond work. I am saddened to hear of his death."

11. James Cooper - Lead Cryptographic Analyst at CISD

"Echo and I had professional disagreements as he pushed for access, and I pushed for containment, but I respected his drive for truth. Losing him is... difficult. Despite our differences, he was a necessary presence, and the Board has lost not just a colleague, but a relentless advocate for integrity

My focus has always been the system, not individuals. I ensure that network integrity is maintained, and every action I take is fully logged, verifiable, and reversible."

FOR PARTICIPANTS

Hierarchy of the Incognito Board Office:

Internal Integrity and Breach Oversight (IIBO) - KIRO (Victim) (South Wing - First Level)

- Rowan Hale
- Mira Hayes

Containment Directorate (CD) - SAMEUL (North Wing - First Level)

- John Wick
- Robin Watson

Reality Reconstruction Operations (RRO) - JACK (West Wing - Second Level)

- Alice Blake
- Johnny Depp

Predictive Analytics and Dimensional Logic (PADL) - KIERA (East Wing - First Level)

- Bob Winston
- Henry Cooper

Cyber Integrity & Systems Defense (CISD) - CARL (South Wing - First Level)

- James Cooper
- Emma Blake

Aftermath & Erasure Division (AED) - MAYA (West Wing - Second Level)

- Isaac Grayson
- Mike Wheeler

CYGNUS - Vault of Parity - Basement

Preliminary Conclusion

Based on evidence, the death of Kiro Veyron appears to be the result of a **multisource systems collision** during a classified audit procedure. While the official report categorizes the event as **“Device Malfunction / Network Instability,”** internal inconsistencies suggest deliberate interference cannot be excluded.

All departments of the Incognito Board remain under restricted review until it is determined whether this was an accident, an assassination, or an engineered convergence.
